**Notes:**

- (1) Figures presented in statistical appendices refer to those released up to the end of April 2012. Readers who would like to obtain current statistical information on Hong Kong may visit the 'Hong Kong Statistics' section of the Census and Statistics Department's website ([www.censtatd.gov.hk](http://www.censtatd.gov.hk)). The section is regularly updated and it also provides hyperlinks to relevant government websites for facilitating retrieval of other official statistics of Hong Kong.
- (2) There may be a slight discrepancy between the sum of individual items and the total as shown in the tables due to rounding.

**Special Note:**

\*\* A Population Census was conducted in June to August 2011. The results of the 2011 Population Census provided a benchmark for revising the population figures compiled since the 2006 Population By-census. Population figures from end-2006 to mid-2011 have been revised accordingly. Similarly, other statistics involving the use of the population figures in the compilation process have also been revised to take into account the results of the 2011 Population Census.

**Symbols:**

The following symbols are used throughout the statistical appendices:

- # Provisional figures
- @ Figures are subject to revision later on

	(+7.9)	(+5.5)	(+9.5)

Notes: Figures in brackets refer to percentage changes over the same period of the preceding year.

GNP is a measure of the total income earned by residents of a country or territory from engaging in various economic activities, irrespective of whether the economic activities are carried out within the economic territory or outside. GNP is obtained by adding net external factor income flows (i.e. external factor income inflow *minus* external factor income outflow) to GDP of the same year.

(1) A technical feature of the chain volume measures was that for earlier years, the sum of net external factor income flows and GDP might not be equal to GNP.

Notes: (1) A Balance of Payments (BoP) account is a statistical statement that systematically summarises, for a specific time period, the economic transactions of an economy with the rest of the world. A complete BoP account comprises (a) the current account; and (b) the capital and financial account.

(2) In accordance with the BoP accounting rules, a positive value for the balance figure in the current account represents a surplus whereas a negative value represents a deficit. For the capital and financial account, a positive value indicates a net capital and financial inflow and a negative value indicates a net outflow. As increases in external assets are debit entries and decreases are credit entries, a negative value for the net change in reserve assets represents a net increase and a positive value represents a net decrease.

(3) The estimates of net changes in reserve and non-reserve assets under the BoP framework are transaction figures. Effects of valuation changes (including price changes and exchange rate changes) and reclassifications are excluded.

(4) In principle, the net sum of credit entries and debit entries is zero. In practice, discrepancies between the credit and debit entries may however occur for various reasons as the data are collected from different sources. Equality between the sum of credit entries and debit entries is brought about by the inclusion of a balancing item which reflects net errors and omissions.

Food	+1.8	+2.5	+6.2
Housing	+5.1	+0.7	+6.7

*Notes:* The year-on-year rate of change in the Consumer Price Index (CPI) is an indicator of inflation affecting consumers.

Figures are derived based on the 2009/10-based CPI series. The year-on-year rates of change before October 2010 were derived using the index series in the base periods at that time (for instance the 2004/05-based index series), compared with the index a year earlier in the same base period.

(1) The CPI(A), CPI(B) and CPI(C) respectively cover some 50%, 30% and 10% of households in Hong Kong. The average monthly household expenditure (in HK\$) of these groups during the base period (i.e. Oct. 2009–Sep. 2010) were \$4,500–\$18,499, \$18,500–\$32,499 and \$32,500–\$65,999 respectively. Taking into account the impact of price changes since the base period, the monthly household expenditure ranges of the CPI(A), CPI(B), and CPI(C) adjusted to the price level of 2011 are broadly equivalent to \$4,800–\$19,600, \$19,600–\$34,400 and \$34,400–\$69,900 respectively, and that of the Composite CPI is broadly equivalent to \$4,800–\$69,900. The Composite CPI is compiled based on the expenditure patterns of all these households taken together.

Retained imports <sup>(1)</sup>	668.8	874.7	1,013.7 <sup>@</sup>
Re-exports	2,326.5	2,961.5	3,271.6

Note: (1) Retained imports refer to those imported goods which are retained for use in Hong Kong rather than being re-exported to other places. The value of retained imports is derived by subtracting the estimated import value of re-exports from the value of imports. The former is obtained by removing an estimated re-export margin from the value of re-exports.
