As an interim arrangement, another set of trade in goods and services statistics, compiled based on the *System of National Accounts 2008* including the aforesaid change of ownership principle, is presented in supplementary tables of the *Gross Domestic Product* reports starting from November 2012 for reference. For details about the concepts, definitions and related compilation methods of the change of ownership principle, please refer to the *Special Report on Gross Domestic Product* published in September 2012.

(1) 'Accommodation services' refers to hotels, guesthouses, boarding houses and other establishments providing short-term accommodation.

GNI is a measure of the total income earned by residents of an economy from engaging in various economic activities, irrespective of whether the economic activities are carried out within the economic territory of the economy or outside. GNI is obtained by adding net external primary income flows (i.e. external primary income inflow *minus* external primary income outflow) to GDP of the same year.

(1) Real Gross National Income (RGNJ) is obtained by adding the terms of trade adjustment and real net external primary income flows to real GDP.

Notes: (1) The BoP is a statistical statement that systematically summarises, for a specific period (typically a year or a quarter), the economic transactions of an economy with the rest of the world (i.e. between residents and non-residents). A complete BoP account comprises two broad accounts: (a) the current account; and (b) the capital and financial account.

(2) In accordance with accounting rules adopted in compiling the BoP, a positive value for the balance figure in the current account represents a surplus whereas a negative value represents a deficit. In the capital and financial account, a positive value indicates a net financial inflow while a negative value indicates a net outflow. As increases in external assets are debit entries and decreases are credit entries, a negative value for the reserve assets represents a net increase while a positive value represents a net decrease.

(3) The estimates of reserve and non-reserve assets under the BoP framework are transaction figures. Effects of valuation changes (including price changes and exchange rate changes) and reclassifications are not taken into account.

(4) In principle, the net sum of credit entries and debit entries is zero. In practice, discrepancies between the credit and debit entries may occur for various reasons as the relevant data are collected from many sources. Equality between the sum of credit entries and that of debit entries is brought about by the inclusion of a balancing item which reflects net errors and omissions.

@ Figures are subject to revision later on.

#### Year-on-year Rates of Change in Consumer Price Indices

	<i>Percentages</i>

Composite Consumer Price Index <sup>(1)</sup>	+2.4	+4.4	+3.0
Food	+2.4	+4.1	+4.0
Housing	+0.4	+6.7	+5.1
Consumer Price Index (A) <sup>(1)</sup>	+2.7	+5.6	+4.0

Food	+2.5	+3.9	+4.3
Housing	+0.7	+5.0	+4.1

Notes: The year-on-year rate of change in the Consumer Price Index (CPI) is an indicator of inflation affecting consumers.

Figures are derived based on the 2009/10-based CPI series. The year-on-year rates of change before October 2010 were derived using the index series in the base periods at that time (for instance the 2004/05-based index series), compared with the index a year earlier in the same base period.

(1) The CPI(A), CPI(B) and CPI(C) respectively cover some 50%, 30% and 10% of households. The average monthly household expenditure (in HK\$) of these groups during the base period (i.e. Oct 2009–Sep 2010) were \$4,500–\$18,499, \$18,500–\$32,499 and \$32,500–\$65,999 respectively. Taking into account the impact of price changes since the base period, the monthly household expenditure ranges of the CPI(A), CPI(B) and CPI(C) adjusted to the price level of 2015 are broadly equivalent to \$5,600–\$22,800, \$22,800–\$39,400 and \$39,400–\$79,200 respectively, and that of the Composite CPI is broadly equivalent to \$5,600–\$79,200. The Composite CPI is compiled based on the expenditure patterns of all these households taken together.
